## Shape Your City Smart, Shape Your Future Smarter

RUPP has come a long way toward its goal to become a comprehensive and vital Cambodian university. In the past five years, the number of students enrolling has steadily increased. RUPP attempts to address the issues of knowledge gaps and skill mismatch in the country, but also to build capable students with strong human capital in achieving long term sustainable development of the country. This newly established program will be current and international with teaching and research innovation built on strong engagement from faculty members and post graduate students.

With peace and stability Cambodia has experienced rapid urban growth, where regional integration and industrial development have rapidly occurred in the absence of adequate infrastructure and social protection (legal, judicial) mechanisms. Without adequate planning capacities, conventional technocratic solutions can simply increase risk and exacerbate urban problems. The need for qualified urban planning professionals with comprehensive skills, knowledge, and positive attitudes is seen as important factors to enhance sustainable urban development. This program will offer innovative research and training with comprehensive knowledges, attitude, and skills for students with urban planning expertise in recognizing and addressing urban problems with capabilities to plan for new towns with more sustainable and inclusive manner.

The 21st century is an urban era. We observe rapidly increasing urban populations where cities now become the primary engines of economic growth of a country. In this transitional period it is a critical to plan and build sustainable and just cities in the most efficient way. Cambodia needs trained experts who can meet the challenges of urban congestion, informal settlements, and health, sanitary and urban justice/crime problems. In collaboration with RUPP, we, University of Seoul (UOS), are glad to be part of the journey fostering the future leaders who will shape the cities of Cambodia through our long term support for the new Department of Sustainable Urban Planning and Development. We believe DSUPD will help its students to build a rewarding career. Take your first step with us and find your pathway to success in this challenging field!

H.E. Dr. Chet Chealy,  
Rector of Royal University  
of Phnom Penh

Dr. Rath Sethik,  
Dean of Faculty Development

## Shape Your City Smart, Shape Your Future Smarter

### Goal & Objectives

*Cultivating Comprehensive Urban Planning Experts in response to Cambodian Urban Growth*

Response to demand of  
Urban Planning Experts

Obtain Comprehensive  
Urban Planning  
Capabilities

Obtain Sustainable  
Urban Development  
Capabilities

### Education Programs

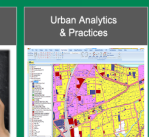

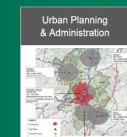

You can obtain various education to solve Cambodia's urban problems in DSUPD. You can learn not only a theory, but a variety of urban planning practices at classrooms with smart equipment. Also not only Cambodian professors but also Korean professors with various experiences in urban planning in Korea can teach you through F2F or online classes.

*Comprehensive & Practical  
Urban Planning Capabilities*

Urban planning and design,  
Smart urban infrastructure,  
Urban economy and real estate development,  
Urban sustainable development

*Global Urban Planning Trends*

Urban Resilience,  
Smartcity, GIS, statistics,  
Big-Data and data-based planning

### For your future career

After graduate from DSUPD, you will be able to work as public officer working on urban planning sectors and other ministries who are working in urban planning, or you will be able to work for development partners, civil society, community services or private companies to participate in real estate and new town development. Some of you may be in charge of planning major new towns in Cambodia in the future. Shape your cities more beautiful, clean and smart with your hands!
